

Figure 1: Scope of the RED III requirements and minimum greenhouse gas savings compared to those resulting from the use of biomass fuels in the transport sector and for electricity, heating, and cooling production a

*biofuels, bioliquids, biomass fuels and renewable fuels of non-biological origin;

** In the case of installations producing gaseous biomass fuels with the following average biomethane flow rate:

(i) above 200 m3 methane equivalent/h measured at standard conditions of temperature and pressure, namely 0 °C and 1 bar atmospheric pressure;

(ii) if biogas is composed of a mixture of methane and non-combustible other gas, for the methane flowrate, the threshold set out in point (i), recalculated proportionally to the volumetric share of methane in the mixture.

***Until 31/12/2030, the sustainability and GHG emissions saving criteria set out in Article 29 in its version in force on 29/09/2020 apply, only if support was granted before 20/11/2023 and that support was granted in the form of a long-term support for which a fixed amount has been determined at the start of the support period and provided that a correction mechanism to ensure the absence of overcompensation is in place.
